## Hints

- 1 The average is the sum of the numbers divided by the quantity of the numbers.

---

**Hints**

- 2** Make assumption on Jerry's age.

---

**Hints**

- 3** Draw out a few pictures to find the number of pins needed.

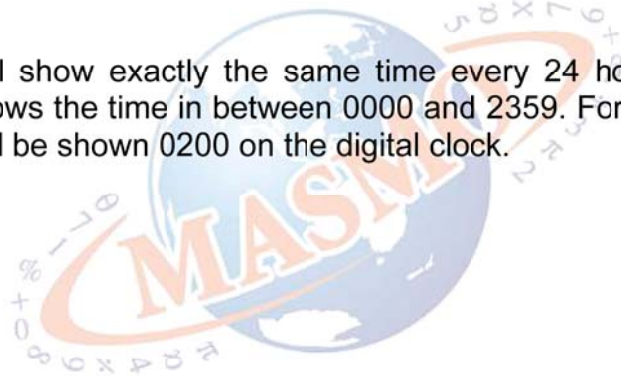

---

**Hints**

- 4** The clock will show exactly the same time every 24 hours. Besides, the clock only shows the time in between 0000 and 2359. For example, 5 hours pass 2100 will be shown 0200 on the digital clock.

---

**Hints**

- 5** If a man travels at 10 km/h, then he will be traveling 5km in half an hour.
